Direction Series 50mm Profile Panel System offers all Manner of Variations to suit your needs

To most 'A screen system is a screen system.' At Emjess Interiors however, designing and manufacturing a screen system is an evolutionary process, whereby adding this product to our already well proven range allows even more options, to achieve the perfect solution

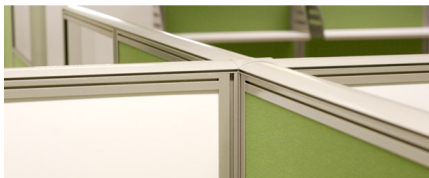

The Direction System offer's:

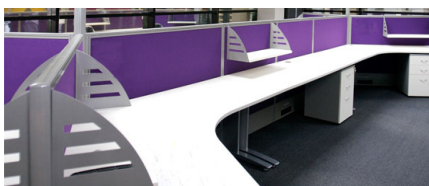

"Gear Joiner" exclusive addition to bi-fold panels for minimal storage when not in use, similarly panels may be extended to create a variety of room & layout options.

"Upholstered tile duct" using standard Elsafe soft/hard wired GPO & Data "Integration with Variation Leg", joined either by the gear joiner or direct adaptor, this provides yet further options for workstations requiring the acoustic benefits of thicker panels and/or integral screen based ducting capacity.

"Off Module Storage", this is attached via top cap fitting and allows random positioning of shelf units, paper trays and accessory units.

"Cast Alloy Caps", colour matched & offer minimalistic treatment at all junctions

Direction panels may be glazed, upholstered, ducted, stacked, angled, desk mounted screens or screen mounted desks.

"Direction Panel is the most versatile evolution of a panel system yet!"

DESK TOP MOUNTED SCREENS

Mounted to the desk with basic clamp style brackets, desk mounted screens are easy to freight, install and reconfigure. A screen that starts from the desk top up promotes air flow and saves on raw materials.
